2. You can manually enter the actual result and override the system with your option.

You can browse this menu by Results, Finished events in tickets, Pending events and all finished.

Please note, in oder to have events populated such as tickets, played events and others you will need to populate the system with real money players.

The screenshot shows the Content management section of a software application. On the left is a sidebar with icons for Dashboard, Content (selected), Content management, Menus management, Users, Live Events, Prematch Events, Tickets, Finance, Casino, Poker, and Settings. The main area has tabs for List and Create, and a sub-section titled Data list. It displays a table with columns Id, Title, Url, Actions, and Translations. Two records are listed: one for Terms (Id 18) with Url 'betting-rules' and another for Responsible gambling (Id 17) with Url 'responsible-gambling'. Both records have View, Edit, Delete, and Translate buttons in the Actions column, and 'Swedish' in the Translations column. A footer message says 'Page 1 of 1, showing 2 records out of 2 total, starting on record 1, ending on 2'.

Content menu – Content management is the part where you add your own terms and conditions, responsible gambling or any other text you want to publish onto the existing setup. You can edit, Delete and translate the menu fields into unlimited languages.

The screenshot shows the Users management section. The sidebar includes icons for Dashboard, Content, Users (selected), Staff, Create user, Create staff, Live Events, Prematch Events, Tickets, Finance, Casino, and Poker. The main area features search fields for Username, Email, Balance, Registration Date, and Last Visit, with a Search button. Below is a List tab and a Data list sub-section. A table lists users with columns Id, Username, Email, Balance, Registration Date, Last Visit, and Actions. The users listed are Nishantspy, tommy, zevelal1, Animalheyes, Emusisi, MADHAN12345, erebos, and Ananda1. Each user row includes Edit, Delete, Fund, and Charge buttons in the Actions column. The registration dates range from February 2019 to August 2019, and last visits are mostly from August 2019.

USERS – The menu is self explained, you can access, edit, verify users with also the option to charge and fund the users (players) too.

Meaning for example in an offline business you can accept cash in hand (credits) and put manually credits on the user accounts if you don't have an option to accept online payment methods.

You can search user by email address, username, amount on account registration date and last visits to narrow down your searches to the criteria you need.

ID	Username	Balance	Group	Referral	Actions
155	branchagent1	0 €	8	branch1	<button>Edit</button> <button>Delete</button> <button>Fund staff</button> <button>Charge staff</button>
145	agent	0 €	Agents	-	<button>Edit</button> <button>Delete</button> <button>Fund staff</button> <button>Charge staff</button>
135	branch1	0 €	Branches	admin1	<button>Edit</button> <button>Delete</button> <button>Fund staff</button> <button>Charge staff</button>
123	demo556	10 873 €	Administrators	admin1	<button>Edit</button> <button>Delete</button> <button>Fund staff</button> <button>Charge staff</button>
44	admin1	0 €	Administrators	-	<button>Edit</button> <button>Delete</button> <button>Fund staff</button> <button>Charge staff</button>

Total: 10872.60 €

Page 1 of 1, showing 5 records out of 5 total, starting on record 1, ending on 5

There is also the option to create STAFF members to manage different parts of the system, for example Admins is the highest value of the system with full access.

Agents, branch cashiers and operators are for resellers and workers connected to the business you are intent to run and preferably this is that you create and pass them this access login,

When they login on /admin page, they enter their login credentials you made for them, and select the correspondent access point, such as agent, cashier or whatever associated with their account.

The screenshot shows a software interface for managing odds. On the left is a sidebar with various menu items: Dashboard, Content, Users, Live Events, Prematch Events, Tickets, Finance, Casino, Poker, Settings, and Risk management. The main area displays information for a football match between Hue FC U19 and Thanh Hoa U19. At the top, there's a section for suspending events, with a checked checkbox. Below it, details are shown: Sport name: Football, League name: Vietnamese Championship U19, Event name: Hue FC U19 - Thanh Hoa U19, Current time: 86 min, and Current score: 2 - 3. A table titled "ID: 4560544 Betting type: Match Result" lists odds for outcome 1 (22.00), Draw (4.10), and outcome 2 (1.22). Each row has a "Suspend Odd" checkbox.

Name	Odd	Suspend Odd
1	22.00	<input type="checkbox"/>
Draw	4.10	<input type="checkbox"/>
2	1.22	<input type="checkbox"/>

Live events – If your setup includes sports betting this part will be active on your setup and basically it pulls the odds data feed from betclic free of charge and you have the power to manually override the suggested odds and put your own odds, higher or lower of your choice as you wish and display whatever odds you want for players on every match, league and event.

This screenshot shows the same software interface as the previous one, but with changes made to the odds. The odds for outcome 1 were changed from 22.00 to 300, and the odds for outcome 2 were changed from 1.22 to 1.1. The rest of the interface remains the same, including the suspension checkboxes and the overall layout.

Name	Odd	Suspend Odd
1	300	<input checked="" type="checkbox"/>
Draw	300	<input type="checkbox"/>
2	1.1	<input type="checkbox"/>

For example; you can suspend any event and odds at any time, and on the same thing you can edit any odds and change it as you see fit, there is no limitations of what you can do on this part.

The screenshot shows the software's main menu on the left with various options like Dashboard, Content, Users, Live Events, and Prematch Events. The Prematch Events option is selected. The main area displays a list of prematch events. The columns include Id, Import, Name, Status, Type, Date, Result, Active, League, Feed Type, and Actions. The data shows several upcoming matches from different leagues.

ID	Import	Name	Status	Type	Date	Result	Active	League	Feed Type	Actions
172865	1959934	Aarau - Servette	Not Started	Prematch	2019-03-01 18:00:00		<input checked="" type="checkbox"/>	Swiss Challenge League	Source	<button>View</button> <button>Edit</button> <button>Delete</button>
172864	1956582	Vitosha Bistritsa - Etar Tarnovo	Not Started	Prematch	2019-03-03 09:30:00		<input checked="" type="checkbox"/>	Bulgarian Pr. League	Source	<button>View</button> <button>Edit</button> <button>Delete</button>
172863	616404	Foolad Khuzestan - Esteghlal	In progress	Prematch	2019-02-28 11:30:29	0 - 0	<input checked="" type="checkbox"/>	Iranian Pro League	Source	<button>View</button> <button>Edit</button> <button>Delete</button>
172862	616243	Mohun Bagan AC - Indian Arrows	In progress	Prematch	2019-02-28 11:30:47	0 - 0	<input checked="" type="checkbox"/>	Indian League 1	Source	<button>View</button> <button>Edit</button> <button>Delete</button>
172861	616201	Serbia U19 - Slovenia U19	In progress	Prematch	2019-02-28 11:05:15	0 - 0	<input checked="" type="checkbox"/>	Friendly Ints. U19	Source	<button>View</button> <button>Edit</button> <button>Delete</button>

PREMATCH EVENTS – If you go to meny field prematch events you will se a similar feature as the live, only this is for upcoming games and as by the same basics you will have the same kind of options to add, change and edit the odds to be displayed to the players as you like.

The screenshot shows the details of a prematch event. The top navigation bar includes List, Create, View, and Edit buttons. The main content area displays the event ID (172865) and name (Aarau - Servette). Below this, there is a button to "Add betting types to event". A table lists the betting types with their odds and current ticket counts.

Name	Odd	Tickets	Staked
1 - 0	12.00	0	0€
2 - 0	17.00	0	0€
2 - 1	10.00	0	0€
3 - 0	35.00	0	0€
3 - 1	22.00	0	0€
3 - 2	26.00	0	0€
4 - 0	101.00	0	0€
4 - 1	60.00	0	0€

Click the VIEW button to display current placed bets, amounts and other data on specific games

Prematch events – Sports and leagues

Here you can activate and deactivate sports you want to display by default.

All sports, leagues and odds are being pulled from betclick free sources and please note that the live part may be delayed from a couple seconds to 1 hour, this should be considered as a demo odds feed and if you need a more up to date data feed its fully possible to plugin any 3:rd party provider as you prefer.

The screenshot shows a software interface with a dark sidebar menu on the left and a main content area on the right. The sidebar includes options like Dashboard, Content, Users, Live Events, Prematch Events (selected), Prematch events, Sports and Leagues, Events Printing, Results, Tickets, Finance, Casino, and Poker. The main content area has a header 'From' and a date range selector. The date range selector shows 'February 2019' with days from 27 to 28, and a dropdown arrow indicating more dates.

Events printing – Basically means you can print the events set by your date of choice.

The results is where you manually enter the results and outcome of placed bets.

The system is semi automated, odds are being pulled into the system from betclic API and you manually close the tickets from the Cpanel.

From this menu there are several options for you to narrow down different solutions.

TICKETS – search, browse, view and print tickets that have been placed into the system.

For example, you can enter any amount, date, type, potential winnings and other options to find your specific ticket you are looking for.

Scroll down to view the search result of your options.

Please note that you need either dummy data or real placed tickets from players in order to see any results. To browse the ticket, please press the VIEW button to the right to open the ticket.

The screenshot shows the TollBet software interface. On the left is a vertical sidebar with navigation links: Dashboard, Content, Users, Live Events, Prematch Events, Tickets, Finance, Casino, Poker, Settings, Risk management, and Marketing. The main area has tabs for 'List' and 'View'. The 'View' tab is active, displaying the 'Ticket overview' section with a table showing a single ticket (ID 108) from 2018-10-19 at 22:31:30 by user 'luismat' with a multi bet type, odds 2.87, stake 1 €, service fee 3 %, and return 3 €, in pending status. Below this is the 'Ticket details' section with a table showing two events: Paris Saint-Germain - Amiens (Match Result 1) and Strasbourg - Monaco (Match Result 1). Both are pending with odds 1.12 and 2.56 respectively. Each row has 'View event', 'Enter result', and 'Cancel event' buttons.

After hitting VIEW button you will reach this option, You can manually enter results, Cancel events and close the ticket so it will show as won or loss on the player account.

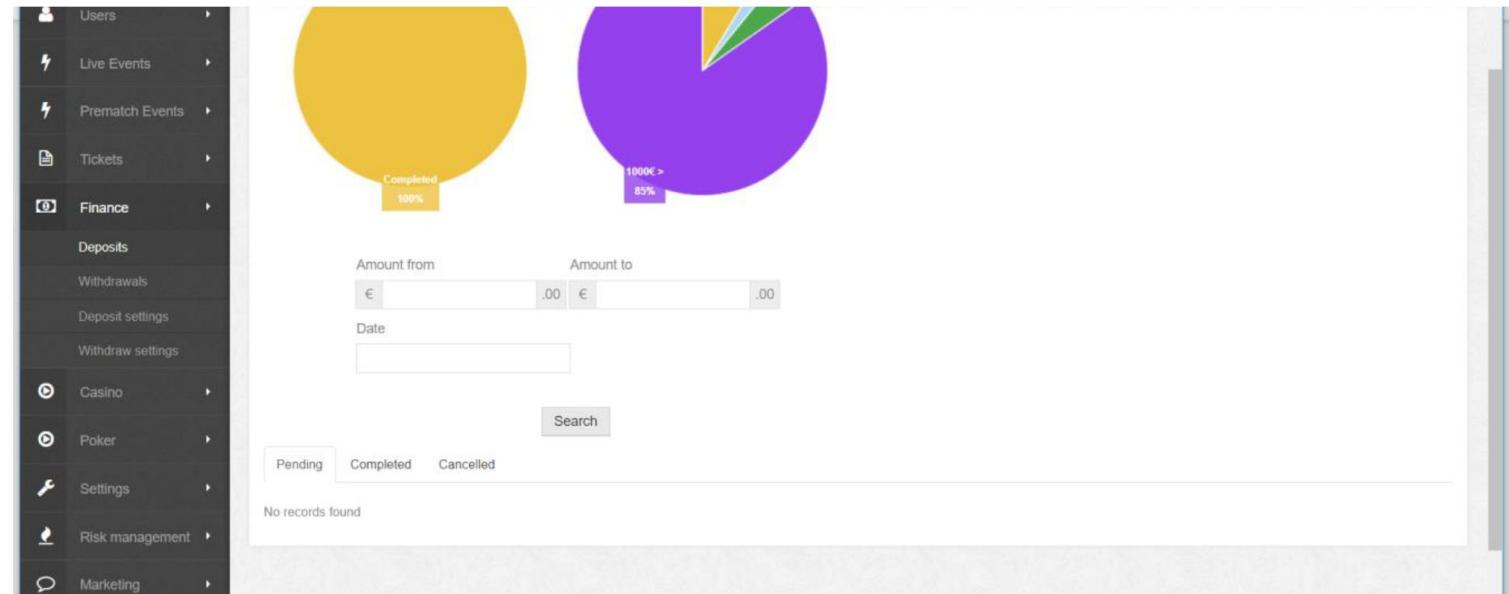

There is also the option to PRINT the ticket by pressing the button PRINT

Printing tickets are the option for land based / offline ticket printing ideally if you want to use betshops, land based ticket printer or cash in hand tickets.

In most cases you might need some customizations all depending on the setup you need to run and

once again to mention, you will receive an open sourcecode software system and with this said, you can modify and make any kind of improvements you need with no limits what so ever.

FINANCE – DEPOSITS

search the deposits made through the system.

as mentioned earlier you need either dummy data or real deposits from players to show any results on a new setup.

Description	Value
Allow automated deposits	Yes
Allow manual deposits	No
Allow bitcoin deposits	Yes
Allow NovinPal deposits	No
Allow Paypal deposits	Yes
Allow Skrill deposits	Yes
Lowest amount for deposit	0.1
Highest amount for deposit	50000

1.1 *DEPOSIT SETTINGS allows you to decide which payment gateways you want to activate and use in the system.*

The actual payment gateway API settings are directly made into the code for security reasons, You will need to manually put the api:s as below description:

Bitcoin payment gateway

Go to app/plugin/payments/config

here you will find the various payment options to choose from

For example if you want to activate your bitcoin payment gateway to the system you simply open the blockchain.php file

Line 10 to 15

```
'submit_url'      => "",  
"api_key"         => "7ce0258c-5f24-4525-b29d-823a34585",  
'test'            => false,  
'blockchain_root' => 'https://blockchain.info/',  
'secret'          => null,  
  
'xpub'           =>  
'xpub6D8PXB3FLvPkzKi8a1ErPPWylUHMUHmugngFB69879797iFJYKQdbirtHMFBo1SPUiyX  
LQkxwmPzcMbKMiW'
```

Now go to blockchain.com and login or signup for a merchant account, and grab your own api key and xpub code and replace in this file, save and upload and now the bitcoin payments will arrive directly into your wallet for every deposit.

Save and upload in order to activate the payment gateway on each gateway you want to use.

Setup withdraw settings to secure your sportbook profit and reduce risks.

Description	Settings
Lowest amount for withdraw request	10
Highest amount for withdraw request	50000
Allow withdraws	Yes

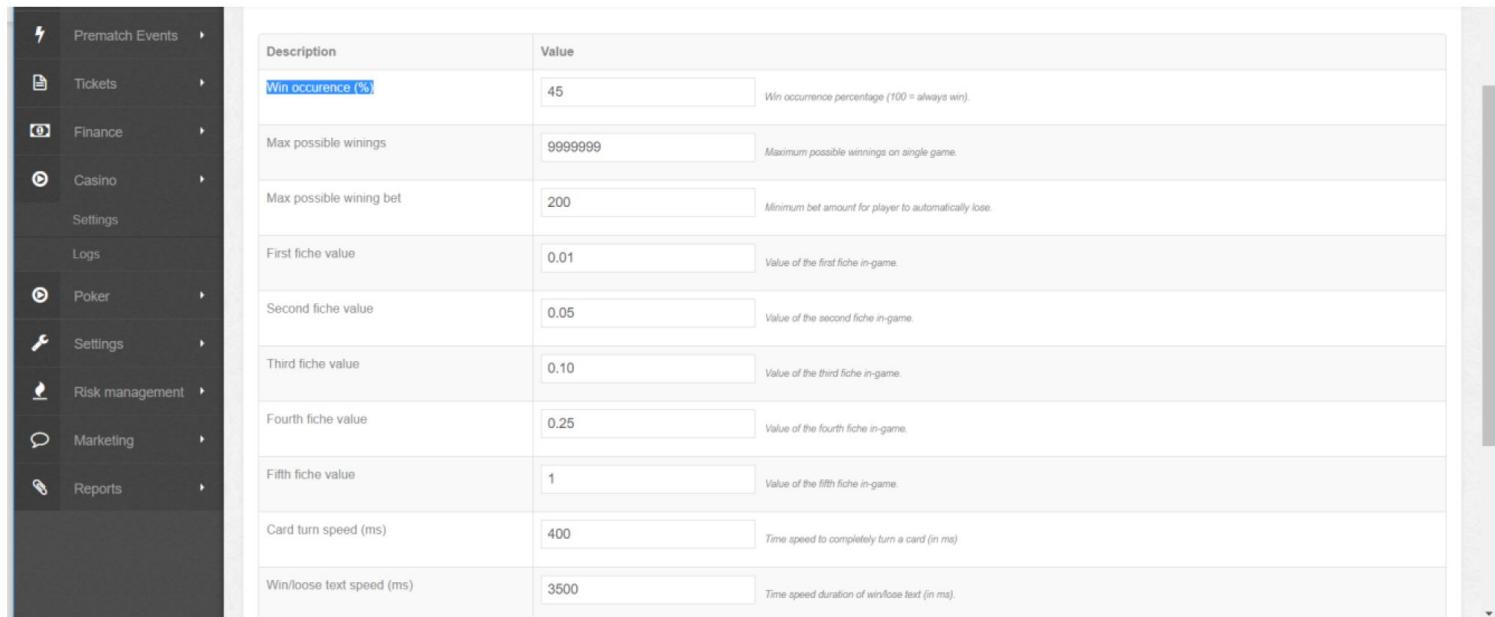

Save

Withdrawal settings if you need to set any limitations of amounts, do so here.

Description	Value
Win occurrence (%)	45
Max possible winnings	9999999
Max possible wining bet	200
First fiche value	0.01
Second fiche value	0.05
Third fiche value	0.10

If your software includes casino games and / or virtual games you will have this casino tab menu option.

The amount of games all depends of the purchase option you select and you can manually set maximum winnings, winning percentage and limitations to make you either be unbeatable as the house or for the players to win often but with a maximum winning of your choise.

The screenshot shows a software interface with a sidebar menu on the left and a main configuration table on the right.

Sidebar Menu:

- Prematch Events
- Tickets
- Finance
- Casino
- Settings
- Logs
- Poker
- Settings
- Risk management
- Marketing
- Reports

Configuration Table:

Description	Value	Details
Win occurrence (%)	45	Win occurrence percentage (100 = always win).
Max possible winnings	9999999	Maximum possible winnings on single game.
Max possible winning bet	200	Minimum bet amount for player to automatically lose.
First fiche value	0.01	Value of the first fiche in-game.
Second fiche value	0.05	Value of the second fiche in-game.
Third fiche value	0.10	Value of the third fiche in-game.
Fourth fiche value	0.25	Value of the fourth fiche in-game.
Fifth fiche value	1	Value of the fifth fiche in-game.
Card turn speed (ms)	400	Time speed to completely turn a card (in ms)
Win/lose text speed (ms)	3500	Time speed duration of win/lose text (in ms).

You can manually set the percentage for the player to win as you like,
 Determine what the maximum winning should be so you do not go bankruptcy directly and each
 and every one of the games can be individual set so you can have some games do more payouts and
 others with less.

The idea behind this is that you can pick one (or more games) and call them jackpot games,
 Place a ticket on the game with any amount you want to display and keep a low winning rate,
 once you decide to release a jackpot winning, just go in to settings and pop up the winning
 percentage and one lucky winner will win it all.

There are several reasons and options you can do here related to this manual settings of game
 winnings.

The screenshot shows a software application interface. On the left is a vertical sidebar with the following navigation links:

- Dashboard
- Content
- Users
- Live Events
- Prematch Events
- Tickets
- Finance
- Casino** (selected)
- Settings
- Logs
- Poker
- Settings

The main content area has two sections. At the top is a horizontal menu bar with various game names as buttons:

- High Low
- BlackJack
- Roulettes
- Baccarat
- Caribbean Stud
- Scratch fruit
- Slot Christmas
- Slot chicken
- Slot ramses
- Slot space
- Slot fruits
- Keno
- Bingo

Below this is another row of buttons:

- Greyhound Racing
- Horse Racing
- Soccer slots
- Soccer slots 3D
- Arabian slots
- Joker poker
- Jacks poker
- Red dog
- Slot knight
- Slot pirates
- Diamond high or low

At the bottom of the main content area is a table titled "Logs" with the following columns: Id, User, Message, Game, and Created.

Id	User	Message	Game	Created

SETTINGS – Basic settings related to the system such as languages, meta, registrations will take place within the settings part.

The screenshot shows the 'Ticket settings' configuration screen. The sidebar is identical to the previous one. The main area has a header: 'Setup tickets settings control frontend functionality.' Below this is a table with two columns: 'Description' and 'Value'. The row is:

Description	Value
Ticket printing	Yes <small>Enable (Yes) or disable (No) ticket printing for users and staff.</small>

At the bottom left is a 'Save' button.

Determinate if you need to activate ticket printing or not (as mentioned earlier).

Page 1 of 1, showing 4 records out of 4 total, starting on record 1, ending on 4

Email templates are the actual messages that are being sent out to players when they register, forgotten password and other related messages.

You can edit and translate these as you need.

Risk management is an important part of the system and allows you to manually set limits.

The screenshot shows a software interface with a sidebar menu on the left containing various navigation items such as Dashboard, Content, Users, Live Events, Prematch Events, Tickets, Finance, Casino, Poker, Settings, Risk management, General Settings, and Limits for Sports. The main area displays a table titled "Limits for Sports" with the following data:

Sport ID	Sport	Lowest stake	Highest stake
1	Football	No limits	No limits
2	Tennis	No limits	No limits
3	Formula 1	No limits	No limits
4	Basketball	No limits	No limits
5	Rugby Union	No limits	No limits
6	Cycling	No limits	No limits
7	Golf	No limits	No limits
8	Volleyball	No limits	No limits
9	Handball	No limits	10
10	Cricket	No limits	No limits

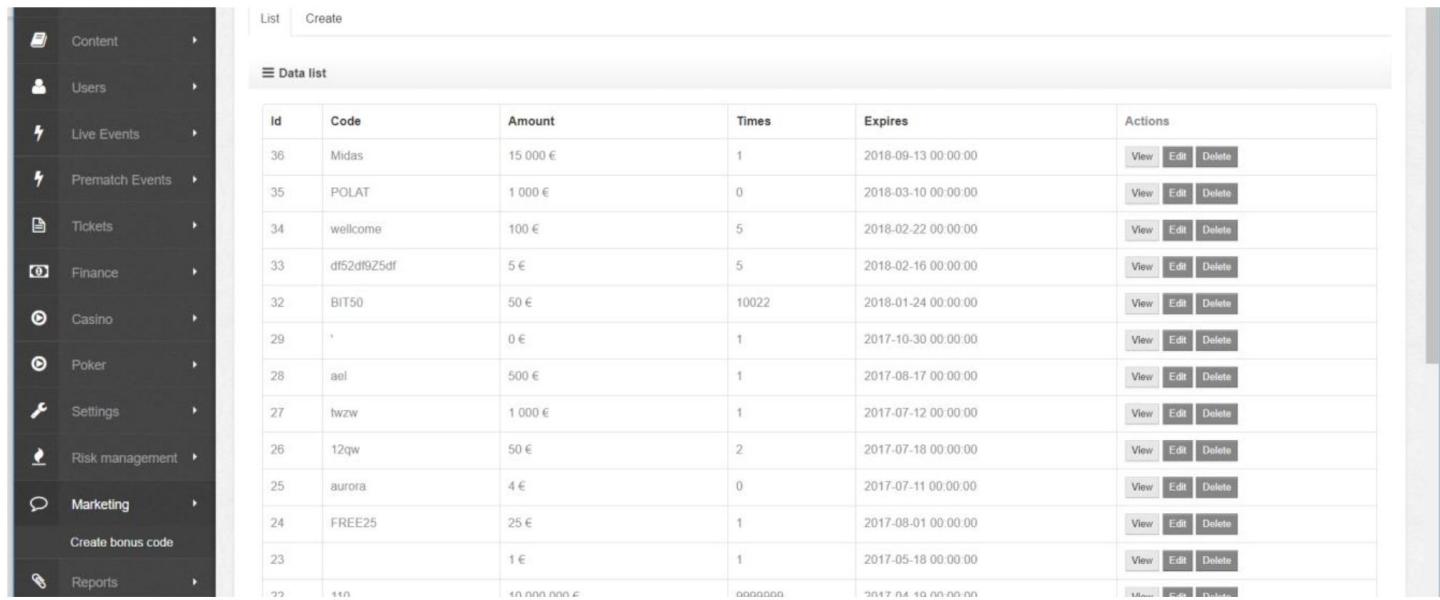

Limits for sports allows you to override the global settings in order to fit your needs too.

The screenshot shows a software interface with a sidebar menu on the left containing various navigation items such as Dashboard, Content, Users, Live Events, Prematch Events, Tickets, Finance, Casino, Poker, Settings, Risk management, General Settings, and Limits for Sports. The main area displays a table titled "Limits for Sports" with the following data:

League ID	Sport	League	Lowest stake	Highest stake
1	Football	World Cup	No limits	No limits
2	Football	Eng. Premier League	No limits	No limits
3	Football	French Ligue 1	No limits	No limits
4	Football	German Bundesliga	No limits	No limits
5	Football	Italian Serie A	No limits	No limits
6	Football	Spanish Liga Primera	No limits	No limits
7	Football	Champions League	No limits	No limits
8	Football	French Ligue 2	No limits	No limits
9	Football	Dutch Eredivisie	No limits	No limits
10	Football	Belgian First Division A	No limits	No limits

You can even narrow this down to make limitations to leagues too, so if you want a specific limit to leagues within the sports you can do so manually as you prefer.

This means the players cannot place bets lower or higher than the limitations you manually select.

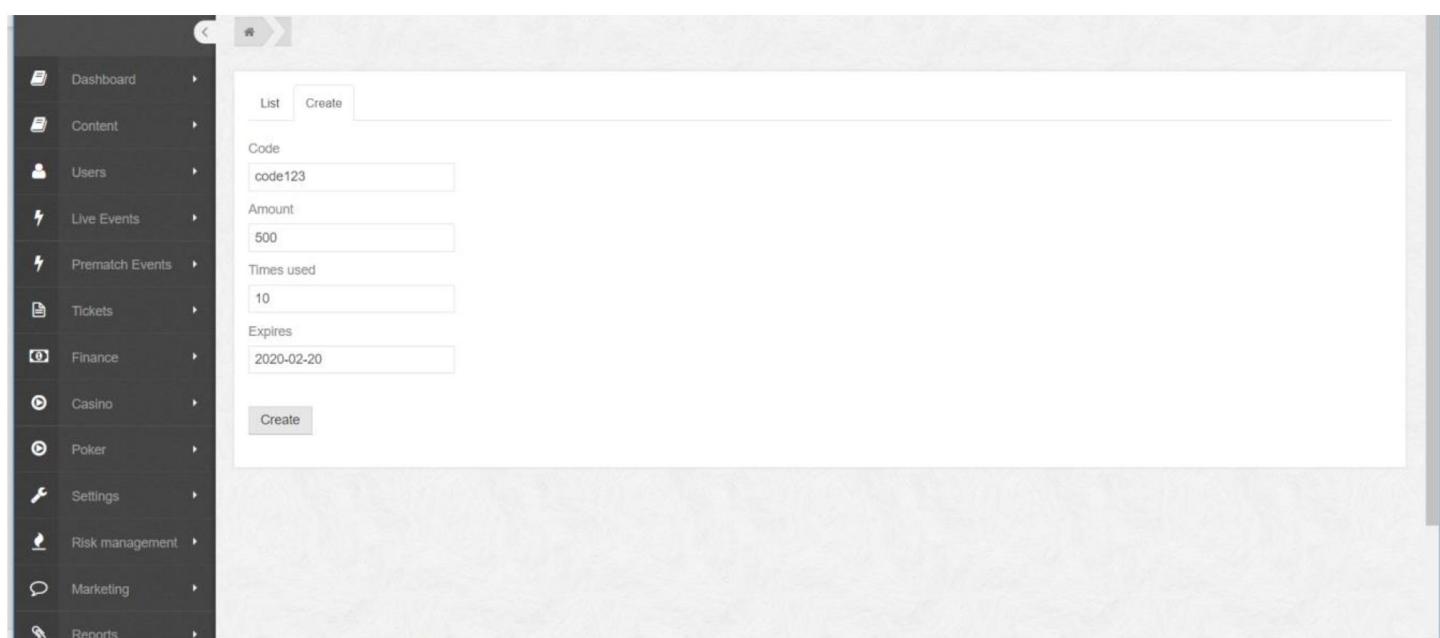

The screenshot shows the Marketing section of the software interface. On the left is a vertical sidebar with icons and labels for Content, Users, Live Events, Prematch Events, Tickets, Finance, Casino, Poker, Settings, Risk management, Marketing, Create bonus code, and Reports. The Marketing tab is currently selected. At the top of the main area, there are 'List' and 'Create' buttons. Below this is a 'Data list' header with columns: Id, Code, Amount, Times, Expires, and Actions. The 'Actions' column contains 'View', 'Edit', and 'Delete' buttons for each row. The data table lists 22 rows of bonus codes, including 'Midas', 'POLAT', 'wellcome', 'df52df9z5df', 'BIT50', etc., with various amounts like 15 000 €, 1 000 €, 100 €, etc., and expiration dates ranging from 2018-01-24 to 2017-05-18.

Id	Code	Amount	Times	Expires	Actions
36	Midas	15 000 €	1	2018-09-13 00:00:00	View Edit Delete
35	POLAT	1 000 €	0	2018-03-10 00:00:00	View Edit Delete
34	wellcome	100 €	5	2018-02-22 00:00:00	View Edit Delete
33	df52df9z5df	5 €	5	2018-02-16 00:00:00	View Edit Delete
32	BIT50	50 €	10022	2018-01-24 00:00:00	View Edit Delete
29	*	0 €	1	2017-10-30 00:00:00	View Edit Delete
28	ael	500 €	1	2017-08-17 00:00:00	View Edit Delete
27	fwzw	1 000 €	1	2017-07-12 00:00:00	View Edit Delete
26	12qw	50 €	2	2017-07-18 00:00:00	View Edit Delete
25	aurora	4 €	0	2017-07-11 00:00:00	View Edit Delete
24	FREE25	25 €	1	2017-08-01 00:00:00	View Edit Delete
23		1 €	1	2017-05-18 00:00:00	View Edit Delete
22	ttt	10 000 000 €	0000000	2017-04-10 00:00:00	View Edit Delete

Bonus codes is under the MARKETING menu tab.

This feature allows you to manually set any bonus and promotion code you need.

For example if a player makes a deposit and enter a valid bonus code pre set by you from this area you can allow them to receive free credits to play with.

The screenshot shows the 'Create' form for a new bonus code. The sidebar on the left is identical to the previous screenshot. The main area has 'List' and 'Create' buttons at the top. Below is a form with fields: 'Code' (containing 'code123'), 'Amount' (containing '500'), 'Times used' (containing '10'), and 'Expires' (containing '2020-02-20'). At the bottom is a large 'Create' button.

Create a new bonus code and fill out the credentials you want.

Code = the bonus code the player should enter to receive the bonus

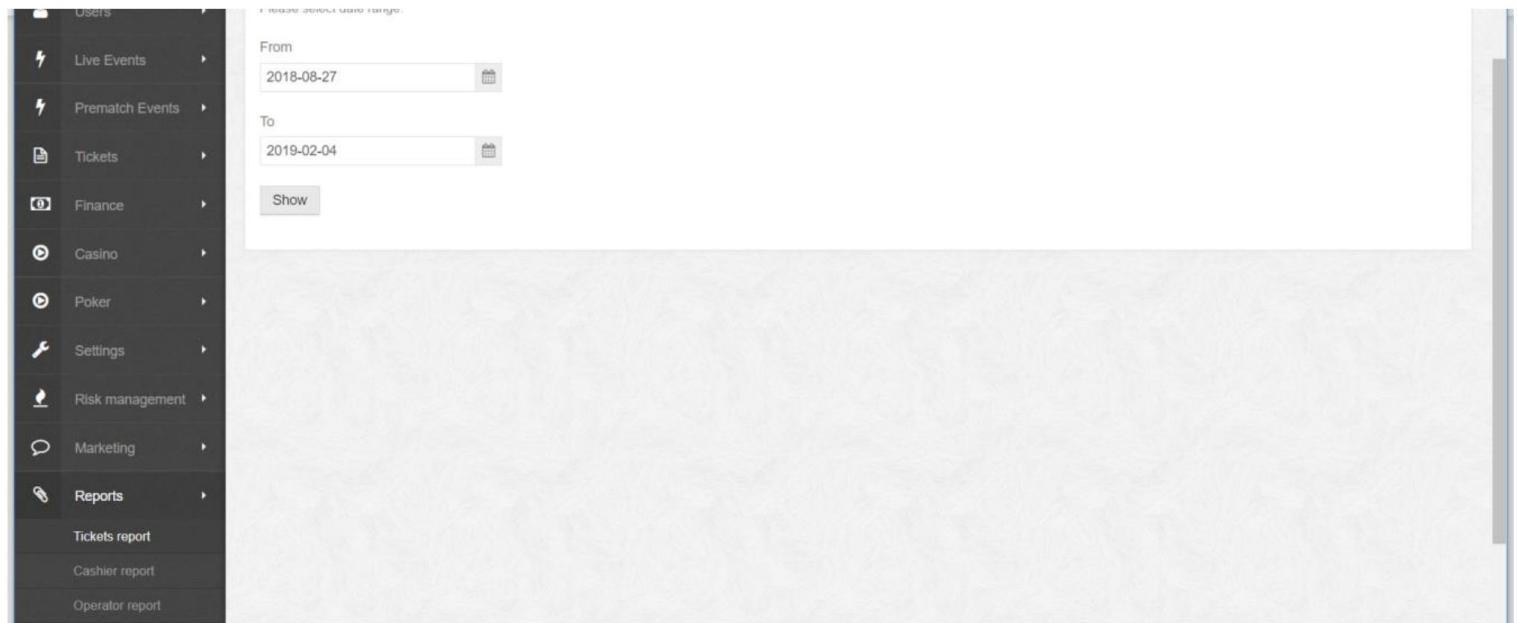

Amount = the amount the player should receive while entering the code

Times used = how many times this code can be used

Expires = when this code should automatically be expired.

SAVE

And now the code is active within the system and you can push the traffic and marketing straight away.

Finally at the bottom we have the REPORTS

This part allows you to browse, search and view reports by custom date and access point of the system.

You can search the casino, sportsbook, staff, user agents and more.

Tickets report							
From 2018-08-27 00:00 to 2019-02-04 00:00							
Tickets

21	27	%s	25.00 €	0 %	18.00	450.00 €	Pending
22	28	%s	1000.00 €	0 %	2.20	2200.00 €	Pending
23	29	%s	1400.00 €	0 %	4.90	6860.00 €	Pending
24	30	%s	1000.00 €	0 %	19.00	10000.00 €	Pending
25	31	%s	1400.00 €	0 %	29.00	10000.00 €	Pending
26	32	%s	1200.00 €	0 %	4.10	4920.00 €	Pending
27	33	%s	1112.00 €	0 %	16.00	10000.00 €	Pending
28	34	%s	1000.00 €	0 %	2.90	2900.00 €	Pending
29	35	%s	1111.10 €	0 %	2.25	2499.98 €	Pending

The report itself is very straight forward and will list accordingly to picture above.

Betmatrix systems install
Betscripts.com
Sportsbetscript.com

1. Setup and installation.

For a fresh installation simply upload the files in root folder of your server / domain.

2. Go to app/config/database.php and enter your credentials

3. Import the database

This is the installation process and this part is now done.

1.2 Cron jobs to display integrated odds feed.

1. In order to get the odds feed to properly display on the website you need to add cronjobs, the cron's must be here for the odds to work and you can add more crons and tweak this around as you need depending on the odds / matches and sports you want to target.

To set our default demo cron jobs for the odds to display as the website demo please use below settings.

Cron job 1: Minute * Hour * Day * Month * Weekday *

```
command: sleep 15; php /home/yourdomain.com/public_html/app/console/cake.php -app /home/yourdomain/public_html/appFeeds.Betclic
```

live

This is for the betclick demo live feed, aka live odds.

Replace yourdomain with your domain url and please note the paths may be different depending of the setup of your system.

Cron job 2: Minute 30 Hour * Day * Month * Weekday *

```
php /home/yourdomain/public_html/app/console/cake.php
```

```
-app /home/yourdomain/public_html/app/ Cron30Min
```

execute

This is for the pre match odds Betclick demo feed.

2. You MUST install REDIS on your server in order for the casino games to work properly.
If you don't know how to do this, please contact your server provider.

1.3 Email settings for account verifications and notifications

You need to add email setting on order for the email to be sent out for player account creations, verifications and things like that and you do these settings in app/config/email.php

Please note, its very important you get the settings right here as the system is sensitive.

For example: if you add a outlook email or gmail email address and put the credentials here, there are cases when the emails do not send out properly anyway, meaning players do not receive these when signing up, this is not a system error, you need to make sure your email provider accepts unsecure app allowance (depending if you are using SSL) or any other layer.

Website	backoffice	login:
---------	------------	--------

By default your login to the c-panel is: www.yourdomain.com/admin321 OR [/admin](http://www.yourdomain.com/admin)

Login credentials initially is

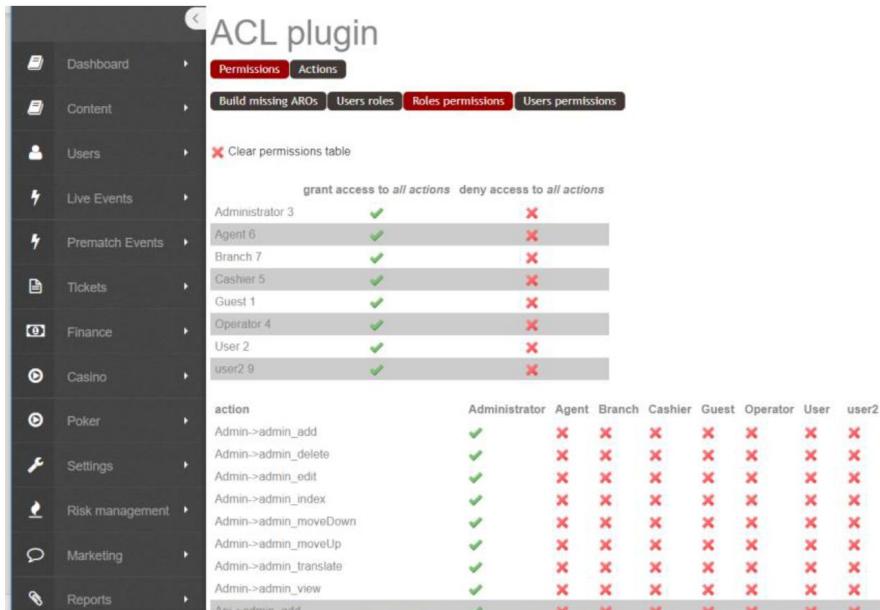

Username: admin1

password: admin1

From here you manage all settings related to players, odds, casino settings and so on.

Second admin login to the ACL

First of all, make sure you are already logged in as an admin as mentioned above then visit yourdomain.com/eng/admin/acl/aros/ajax_role_permissions

The screenshot shows the ACL plugin interface. At the top, there are tabs for 'Permissions' and 'Actions'. Below them are buttons for 'Build missing AROs', 'Users roles', 'Roles permissions', and 'Users permissions'. A 'Clear permissions table' button is also present. The main area displays a grid of user permissions. The columns represent users: Administrator 3, Agent 6, Branch 7, Cashier 5, Guest 1, Operator 4, User 2, and user2 9. The rows represent actions: Admin->admin_add, Admin->admin_delete, Admin->admin_edit, Admin->admin_index, Admin->admin_moveDown, Admin->admin_moveUp, Admin->admin_translate, and Admin->admin_view. Green checkmarks indicate granted access, while red X's indicate denied access.

	Administrator 3	Agent 6	Branch 7	Cashier 5	Guest 1	Operator 4	User 2	user2 9
action	Administrator	Agent	Branch	Cashier	Guest	Operator	User	user2
Admin->admin_add	✓			✗	✗	✗	✗	✗
Admin->admin_delete	✓		✗	✗	✗	✗	✗	✗
Admin->admin_edit	✓		✗	✗	✗	✗	✗	✗
Admin->admin_index	✓		✗	✗	✗	✗	✗	✗
Admin->admin_moveDown	✓		✗	✗	✗	✗	✗	✗
Admin->admin_moveUp	✓		✗	✗	✗	✗	✗	✗
Admin->admin_translate	✓		✗	✗	✗	✗	✗	✗
Admin->admin_view	✓		✗	✗	✗	✗	✗	✗

From here you can enable and disable features, select what to be accessible from the website and not so you can for example shut down any casino game one by one or them all, disable and activate menu links, payment gateways and much more. Before you "play around" make sure you take notes of what you are changing or make an backup of the system including database.

This part is not accessible directly from the cpanel due to security reasons.

**IF you mess around with settings and casino games are not working,
the issue will be due to permission setting in this page.**
